

William Jonathan Porta (Jonathan)

Billings

About

I am passionate about the user experience. I think of myself first as a user, and secondly as a developer. I thrive on the marriage of exceptional design, solid functionality and reliability. Most recently, I have been stoked about Machine Learning, Rails, React, Go and Continuous Integration. I have a long-standing love for Kubernetes, test driven development, tinkering with electronics and embedded processors, and building games in Unity3D. When I am away from my workstation you can find me fixing-up old houses, or tearing apart old vehicles.

Work Experience

Steemit, Inc.

Software Engineer

2019 - 2019

My primary focus was the creation of new user facing features and maintaining existing functionality within the Blockchain's frontend known as Condenser.

- Championed the rollout and revision of Steemit's advertising system
- Designed, Implemented and Deployed the Steem Proposals System UI allowing Blockchain users to vote on community proposals for funding.
- Implemented UI features in React/Redux/Redux-Saga for the Communities UI release - a major featureset adding many SubReddit like features to the Steemit frontend.

Pantheon Systems, Inc.

Senior Software Engineer

2017 - 2018

As a member of The Core Services Team, I participated in and led the development, deployment, and monitoring of new platform features. I participated in the risk review process and infrastructure capacity monitoring. And, I provided support to other engineers in our operational review process.

- Acted as tech lead on the development of new services.
- Championed the adoption of solid development standards such as testing, test coverage metrics, building/managing/using continuous integration pipelines and provisioned distributed systems using config management software.
- Supported Pantheon during growth from 37 employees to over 100 employees as the platform grew from 2Bn requests per month to over 10Bn requests per month.
- Led the release of our HTTPS Everywhere initiative which provided our customers with free HTTPS and automated certificate management.

Pantheon Systems, Inc.

Software Engineer - Full Stack Jedi

2014 - 2017

As a member of The Applications Team, I was responsible for delivering new customer-facing features as well as significant portions of the backend implementation needed to power those features. This often required integrating with multiple backends and APIs, replacing or refactoring legacy services, and owning uptime and reliability for customer-facing systems.

- Led the team in adopting a better development cycle using Kubernetes and local containerization.
 - Designed, built, deployed, monitored, and maintained the next generation of features on the customer-facing dashboard.
 - Rebuilt the real-time messaging and status pipeline for customer workflow notifications.
-

Cordillera Communications

Web Developer and Multimedia Content Producer - KTVQ

2013 - 2014

At the state's largest television network, I supported the newsroom's content production and dissemination by maintaining our station's CMS and web properties while also building tools for aggregating news content from our sister stations and affiliated networks.

- Oversaw deployment of a large-scale design refresh on the station's primary web property.
 - Built browser extensions to assist journalists' efforts.
 - Improved usability of the legacy CMS system.
-

Design Delegates, LLC

Software Engineer and Operations

2010 - 2012

I worked closely with clients to gather project requirements and de-risk projects prior to the start of development. I also helped sales with the client acquisition process. And, I was responsible for designing and implementing features alongside our geographically distributed development team.

- Worked as an individual contributor on web projects for international clients.
 - Oversaw the development of Android and iOS applications.
 - Developed code and development quality standards, including code review processes and junior engineer mentorship.
-

OSPenterprises

Software Engineer, Owner

2004 - 2010

I helped small local businesses automate business processes through the use of custom software. I led a small team of developers and designers through the software planning, building, and release process. We primarily provided web-based software written in PHP and JavaScript.

- Built over 100 mostly static custom websites for small local businesses.

- Built and maintained web-based timecard management software and small e-commerce stores.
 - Provided ongoing support for hosted products, onsite servers, and phone systems.
-

Education

Rocky Mountain College

Computer Science, Bachelor - Did Not Complete

2007 - 2009

Skills

- **Front End**

- JavaScript
- ES6
- React
- React Native
- Redux
- HTML(5+CSS)

- **Back End**

- Python
- Go
- Node.js
- Django
- Rails
- Shell
- systemd
